

TEN-X AMMUNITION, Inc.

.223 (5.56) "Steel Safe" Frangible Training Ammunition

Ten-X Ammunition, Inc. announces the .223 Rem (5.56mm) "Steel Safe" Frangible Training ammunition that nearly eliminates damage to steel targets and over-penetration in "live fire" houses.

The cartridge is loaded with SinterFire's 55gr frangible projectile and significantly increases target life while maintaining positive function in duty weapons. SinterFire is the only BATF approved frangible bullet.

Steel Safe Ammunition is manufactured to the exacting standards of law enforcement. Ten-X Ammunition also offers departments the option of new or remanufactured brass casings. Remanufactured brass is inspected to the same specification standards as new, but for almost one-third the price of new.

All Steel Safe ammunition is packaged in bulk (500 rounds per ammo can). Prices do not include shipping.
