

TEN-X AMMUNITION, Inc.

TX-40™ Reloading Press

Ten-X Ammunition is proud to introduce the TX-40 Reloading Press and Propelling Charge System.

TX-40 is the only reloading system specifically designed for 40mm less-lethal launching systems that utilize reusable projectiles and standard M212 cases. The TX-40 is easy to use, requires minimal training, and needs only one tool change to accomplish all loading functions. The Propelling Charge designed by Ten-X Ammunition utilize a smokeless .38 caliber blank charge which is unique to the casing brand to be reloaded. The pre-loaded blanks, and Burst Disk in the case of Defense Technology, offer an efficient powder burn with consistent muzzle energy and velocity. Several rounds can be reloaded in less than one minute.

The TX-40 allows departments to cost effectively reload their 40mm less-lethal training rounds with Propelling Charges that replicate duty round performance. With new 40mm rounds exceeding \$25 each, many departments limit their officer training to only two rounds per year. The innovative TX-40 reloading system now gives law enforcement a simple solution to increase 40mm training while decreasing training costs to about \$1 per shot.

The solid metal construction of the TX-40 makes it extremely durable. The powder coated finish and minimal moving parts mean maintenance of the TX-40 a breeze.

When ordering, specify the manufacturer of the less lethal training rounds to be reloaded (i.e., Defense Technology, CTS, ALS, or MAST).
